Practice Areas - Technical Development Support

Applications development and applications support are critical to long term business success. A structured, well organized development environment will assure that business needs are met by your applications. Key components of development and development support include the following:

- ▶ [Business Requirements](#)
- ▶ [Architecture and Design](#)
- ▶ [Planning and Specifications](#)
- ▶ [Staff Support](#)
- ▶ [Project Management](#)

Business Requirements

A clear understanding of the business goals and requirements is critical to success. Avistas professionals understand how to direct the requirements process to assure business goals are correctly identified, understood and agreed before application and data development processes begin.

Architecture and Design

Avistas will work with you and you staff to assure that your short term and long term data and applications architecture will effectively support the defined business requirements. We use a reasoned, standards-based approach to applications and data design.

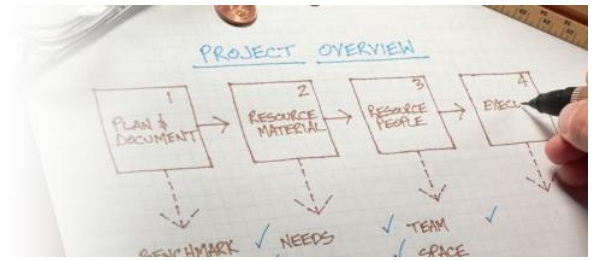

Planning and Specifications

Detailed planning and specifications to meet business requirements are required in each development project to insure that each work group involved can correctly execute their portion of the development. Avistas is experienced in these processes and can assure that this process is correctly executed.

Staff Support

Avistas can assist you in identifying support staff and contractors to meet the needs of the most demanding development projects. We can provide development contract resources or assist you in placing permanent employees to meet your redevelopment and support needs.

Project Management

The success of any project hinges on effective and engaged project management. Avistas professionals can provide direct, hands-on, day-to-day project management or can provide mentoring and quality assurance to your project management resources. On large projects, we frequently provide the program management where your team provides project management for each major segment of the project.

The objective is to be on-budget, on-time and with no surprises for management.
